

RTB / MHRO (Roatan, Honduras) (Elev. 20')

- As of this revision, you cannot be outside the aircraft (i.e. walk-around) without a mask.
- CPDLC available inflight with Cenamer Control: logon to "MHCC".

MIA to RTB – 1

- ➔ Expect the RNAV (GNSS) approach to **Rwy. 7** via IAF RO004.
- ➔ Prior to MELDA Int., Ask CEN Control for Direct **RO004**. Making RO004 **210/4000'** is helpful. Once passing over the IAF, the turn to final is fairly short. Consider gear and flaps 15° prior to turning final.
- ➔ Once on final, you might notice a slight offset to the left. Approach course is 067° and the runway course is 066°.
- ➔ On short final to Rwy. 7, there is a small island that will seem very close as you pass overhead for landing. Use caution if getting too low on the PAPI!
- ➔ The runway surface is quite bumpy after landing and during backtrack. There is a curvature to the runway from one end to the other.
- ➔ If the winds require a landing on **Rwy. 25**, you might consider constructing a visual approach in the FMC using a distance (5 nm) and a 3° glide path. There is a PAPI on the left. Use caution for terrain on that end of the runway.

HAV r	124.55 / 135.1	FUNDI / IKBIX

DEPARTURE - E/O 1020'

- At some point prior to departure, someone from operations will come to the flight deck and ask the captain to accompany them to the flightplan processing room. The flightplan will need the captain's signature and certificate number. A safety vest (and as of this revision) and a mask will be required.
- ACARS uplinks work for loading FMC & receiving final numbers. Clearance should be available 10 mins. prior to push. Ground / Tower for push clearance.
- Approaching US, logon to CPDLC.

RTB to MIA – 1

- For initial FMC setup, ROA032°/200 (UZ498) to fly radial outbound. FIX page to check (ROA & 032 radial).
- May Expect 26K, Flaps 15... very bumpy runway during takeoff.
- Expect clearance: After departure, turn **Direct PABEL**, climb FL280.
- Expect to cross IKBIX or FUNDI @ FL300 per HAV.
